

This new Bowling Center is to be erected on a main highway in the suburban area of a large city. The area is building-up rapidly and other business establishments already located in the vicinity on this road include gas stations, restaurants, drug and other retail stores. The highway has heavy vehicular traffic in both directions and a maximum speed limit of 45 m.p.h.

As shown in the diagram, the building is in the center of a large parking lot, located in the middle of a long block. The terrain is flat so a "pylon or pole" sign in the middle of the lot on the street side may be seen for considerable distance in either direction. The bowling center contains 36 lanes, an 8-table billiard room, cocktail lounge and snack bar. It is planned to have the center open 24 hours a day.

For this competition no signs are to be designed for the building—only the main identification sign, as specified in the rules.

PAUL MARSHALL

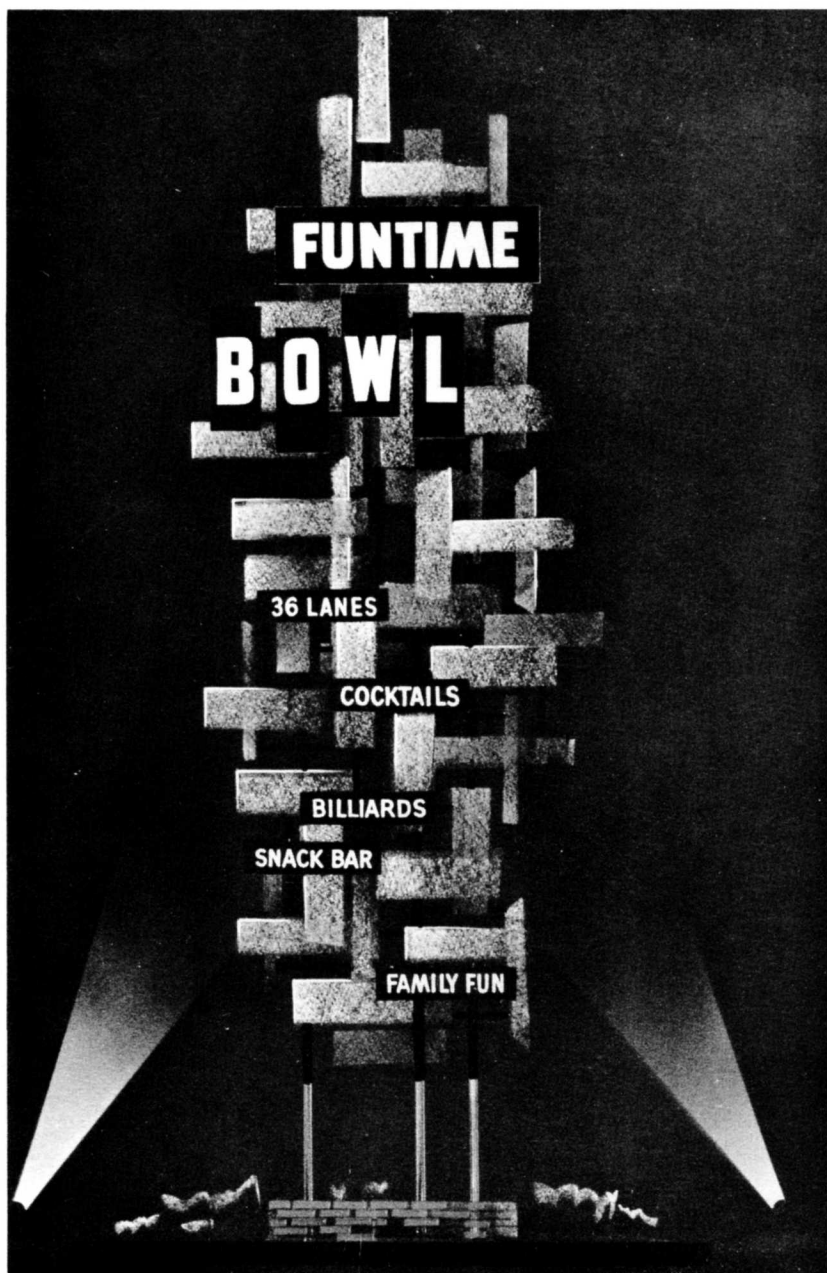

Santa Ana Neon Co.

Santa Ana, Calif.

SPECIFICATIONS

Double-faced display 60 by 25 feet overall. Pylon constructed of fiberglass simulating colored stone and mortar. Each Tiki figure formed from two sheets of fiberglass and joined to a sheet metal core containing pole well and wireway. Surface painted with acrylic colors and clear finish. Subdued interior lighting and surface lighted by flashing red and green, then red, green and white 38 par lamps. Main panel natural wood, deeply

etched by sand blasting and stained. "Kon-Tiki" 72 by 36-inch channel letters, faced with plastic and interiorly lighted by neon. "Lanes" 4-foot channel letters with four rows of exposed turquoise tubing; center tubes flash. Second plastic copy panel 5 by 12 feet. Attraction panel 3 by 14 feet. Two supporting poles simulate torches, gas illuminated.
